

QUESTION 3: DELPHI PROGRAMMING

The school is planning an event to raise money for new equipment and also to donate some of the money to a less privileged school. Tickets are sold by the parents and there will also be lucky draw prizes.

The names of the children are stored as a constant in the array named **arrnames**. There are 23 children in the class. Code has been completed to display the names in the StringGrid component.

NOTE: The output for the lucky draw winners will differ from the example, as it is randomly generated.

3.1 GET INFO:

Write code to retrieve the ticket numbers that have been sold by the children. The information is stored in a text file named **tickets.txt**. Store all the information in a two-dimensional array named **ar2tickets**.

(9)

3.2 DISPLAY:

Display the ticket numbers each child sold, in the StringGrid.

3.3 TICKETS SOLD?

Write code to calculate how many tickets were sold. Display the output making use of a ShowMessage component.

(5)

3.4 LUCKY DRAWS

Using the total calculated in QUESTION 3.3; get 10 random numbers (between 1 and 230) in order to award the 10 lucky draw prizes. If the random number does not represent a ticket that was sold then a new random number must be generated.

3.5 MOST SOLD

Calculate which child sold the most tickets and display the child's name using a ShowMessage component.

(9)

3.6 AMOUNT RAISED?

Calculate and display, making use of ShowMessage components:

- the amount of money raised if each ticket cost R25.
- 40% of the total amount was donated to an underprivileged school. Display the amount that was donated.

Both amounts must be rounded off to two decimal places.

(5)

- Enter your name and surname as a comment line in the first line of the file named **Question3_uX.pas**.
- Save the unit **Question3_uX** and the project **Question3_pX** (File|Save All).
- Make a printout of the code of the **Question3_uX.pas** file.
